- Hospitals
- Health Clinics
- Administrative & Support Facilities
- Federal Building (Renovations)
- Historical Building (Restorations)
- ADA Compliances for Varied Public Access

8(a) CERTIFICATION 307609

Design/Build

Client needs and customer satisfaction are top priorities with Amcore Construction. We understand that in order to accomplish this, effective and clear communication among all vested parties is a top priority. We take time to meet with our clients to thoroughly understand/define project goals, vision for facility utilization, and operating constraints through each junction of the design/build process.

In addition to planning for build accommodations, Amcore employs value engineering for space/time/budget management in the process and final product. The result for our clients is a comprehensive and state of the art approach to the construction process.

Amcore Construction can design and build projects from small TI spaces to ground up Building Construction. We are experienced in the design build process from pre-design discoveries to 100% plans and specifications for construction. Our crews regularly work in controlled environments with strict protocols for safety and security. We meet all standard safety requirements by regularly providing OSHA certified training for all employees. Including OSHA 10 and 30 - 40 Hour HAZWoper and Supervisor, Confined Space, Lead, Asbestos, and Mold Awareness, First Aid, and other job specific training/certification.
